Moulding Guide

Drexel™
MILLWORK & DOORS

People don't buy WHAT you do. They buy WHY you do it.

HISTORY | Different from our competition, Drexel Millwork & Doors (DMD) launched vertical integration within Drexel Building Supply in 2022. From one location in 1985 to nine locations in 2023, our mission has stayed consistent: supply happiness.

WHY | Our "why" is aligned around two important things:
1. Our mission to supply. happiness.
2. All eleven of our core values:

ETHICS | WINNING ATTITUDE | RESPECT | DEVELOPMENT | ACCOUNTABILITY | BALANCE | TEAMWORK | COMMUNICATION | CHANGE | HAVE FUN | CONNECTION

WHAT | From wood species, profiles, prefinishing options, and much, MUCH more, we'll help you find exactly what you're looking for.

supply. happiness.

Table of Contents

All wood moulding orders are subject to a +/- variance of 10% over or under ordered quantities. The invoice will reflect the quantity shipped.

Random Length Wood Mouldings will be shipped based on the breakdown below:

Drexel Standards:

25% 6' - 8'
50% 9' - 12'
25% 13' & Longer

All Knotty Alder mouldings and S4S come in mixed 6'–12' lengths, with most pieces in the 8'–10' range. 12' boards are included as available but should not be expected in high volume. All Knotty Alder 1x8 S4S will be glued for width.

POPLAR

Poplar is characterized as a smooth, tight grain with a relatively soft texture. Because it is a fast-growing, columnar tree, it absorbs minerals from the soil differently than slower-growing hardwoods. It can range from creamy white to "mineral streaks" of olive green, purple, or dark brown/black. This is often called "Rainbow Poplar" and highlights the deep connection between the tree and its environment.

MAPLE

Maple is a dense, heavy hardwood with a very subtle, typically uniform grain. The tree's wide-spreading branches and high density create a naturally tight grain and unique mineral streaks, which occur as the wood captures nutrients. While the appearance is usually consistent, you'll often find small dark spots or rare, decorative patterns like "birdseye" or "curly" figures.

RED OAK

Red Oak is known for its prominent, "open" grain pattern, extreme durability, wide, and high contrast. Expect significant tonal shifts and deep ridges that catch stain to highlight the wood's powerful, symmetrical growth and give Oak its "classic" furniture-grade reputation.

KNOTTY ALDER

Alder is a smaller, more irregular tree compared to the others. It often grows in smaller clusters with a more slender, less formal trunk. Celebrated for its informal charm, Alder features frequent sound knots and pith marks. These are the natural signatures of a smaller, more irregular tree that brings warmth and texture to a space.
